

Future Community Battery Design Concept

- Targeted at inner-urban streets.
- Overcomes #1 barrier for CBs: land access
- Ideal for narrow footpaths
- Streamlined installation and connection processes

- Near silent operation by separation of noisy parts
- Tens of thousands of units market potential across Australia.
- Would make neighbourhood batteries economically viable

Reduced footprint as compared to a 4-panel BESS

Required participants of a pilot project:

1. Battery manufacturer
2. Electricity distributor
3. Council
4. Electricity retailer
5. Financier
6. Virtual Power Plant Operator
7. Asset Owner
8. Project manager
